

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1. (currently amended) A method for decreasing the ratio of liquiritigenin-derived Isoflavones relative to total isoflavone levels in an isoflavanoid-producing plant the method comprising:

- a) transforming a plant cell with a recombinant construct comprising a promoter operably linked to a nucleic acid sequence of at least 200 nucleotides having at least 75% 95% sequence identity to SEQ ID NO:4;
- b) regenerating a transformed plant from the transformed plant cell of (a); and
- c) evaluating the transformed plant obtained from step (b) for a reduced ratio of liquiritigenin-derived isoflavones relative to total isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total Isoflavone levels in an untransformed plant.

Claim 2. (original) The method of Claim 1 wherein the promoter is operably linked, in a sense orientation, to the nucleic acid sequence.

Claim 3. (original) The method of Claim 1 wherein the promoter is operably linked, in an anti-sense orientation, to the nucleic acid sequence.

Claim 4. (original) The method of Claim 1 wherein the recombinant construct comprises a stem-loop structure.

Claim 5. (original) The method of Claim 4 wherein the nucleic acid sequence forms a stem in the stem-loop structure.

Claim 6. (original) The method of Claim 4 wherein the nucleic acid sequence forms a loop in the stem-loop structure.

Claim 7. (original) The method of Claim 4 wherein the nucleic acid sequence forms a loop in the stem-loop structure and the stem consists essentially of SEQ ID NO:7.

Claim 8. (original) The method of Claim 1 wherein the promoter is a seed-specific promoter.

Claim 9. (original) The method of Claim 1 wherein the isoflavanoid-producing plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.

Claim 10. (currently amended) An isoflavanoid-producing plant made by the method of any one of Claims 1 to 8 wherein the plant has a reduced ratio of liquiritigenin-derived isoflavones relative to total Isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total Isoflavone levels in an untransformed plant.

Claim 11. (original) The isoflavanoid-producing plant of Claim 9 wherein the plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.

Claim 12. (original) Seeds or plant parts of the plant of Claim 11.

Claims 13-20 (cancelled)

Claim 21. (currently amended) An isoflavanoid-producing plant comprising in its genome a recombinant construct comprising a promoter operably linked to a nucleic acid sequence of at least 200 nucleotides and having at least 75% 95% sequence identity to SEQ ID NO:4 wherein the plant has a reduced ratio of liquiritigenin-derived isoflavones relative to total Isoflavone levels as compared to the ratio of liquiritigenin-derived isoflavones relative to total Isoflavone levels in an untransformed plant.

Claim 22. (original) The isoflavanoid-producing plant of Claim 21 wherein the plant is selected from the group consisting of soybean, clover, mung bean, lentil, hairy vetch, alfalfa, lupine, sugar beet, and snow pea.

Claim 23. (original) The plant of Claim 22 wherein recombinant construct comprises a promoter operably linked, in sense orientation, to the nucleic acid sequence.

Claim 24. (original) The plant of Claim 22 wherein recombinant construct comprises a promoter operably linked, in an anti-sense orientation, to the nucleic acid sequence.

Claim 25. (original) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure.

Claim 26. (original) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the stem.

Claim 27. (original) The plant of Claim 22 the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the loop.

Claim 28. (original) The plant of Claim 22 wherein the recombinant construct comprises a stem-loop structure in which the nucleic acid sequence forms the loop in the stem-loop structure and the stem consists essentially of SEQ ID NO:7.

Claim 29. (original) The plant of Claim 22 wherein the recombinant construct comprises a seed-specific promoter.

Claim 30. (currently amended) Seeds or plant parts of the plant of any one of ~~Claims~~ Claims 22-29 wherein said seeds and said plant parts comprise said construct in their genome.

Claims 31-39 (cancelled)
